

## Pencil Pot Weaving Kit – *Adult Challenge*

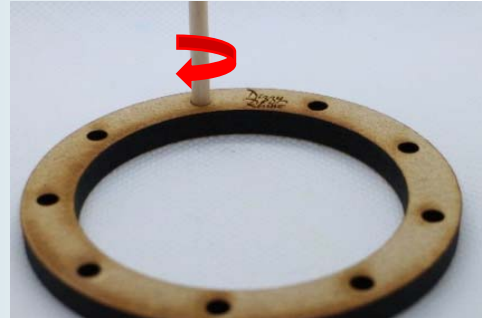

Your Pencil Pot Weaving Kit has been precision cut using LASER technology. Designed so that no glue is required, the rods can be a squeeze. If you follow these instructions, you should be able to assemble your Weaving Kit in just a few minutes.

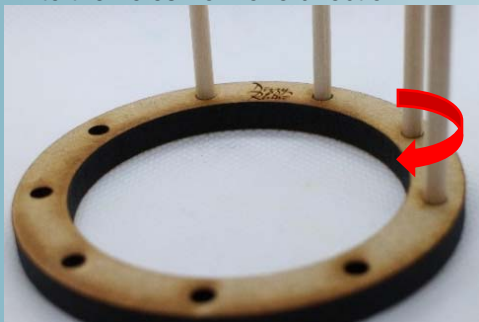

1. First push any remaining 'plugs' from the holes. Your rods will only fit into the holes from one direction.

2. Each LASER cut hole is tapered (like a cone) to ensure each rod is held firmly in position.

3. Pressing down on each rod, twist it into the hole.  
Note: Dizzy Rhino logo facing up.

4. Continue positioning each rod into the holes.

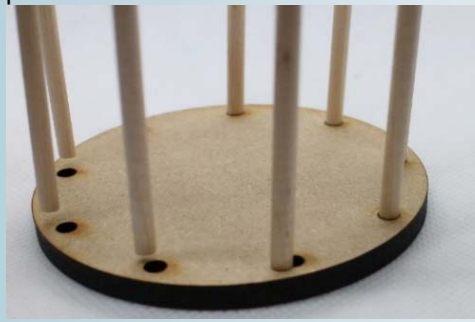

5. Each rod should be as flush as possible with the base.

6. Use the sandpaper provided to thin the ends of any oversized rods.

7. Place your base onto a flat surface, ensuring the tapered holes are facing upward.

8. Align your rods into the holes. It is easiest to start with the proudest/longest and work around.

9. Once all the rods are positioned, hold the weaving frame and carefully tap on a flat surface to fully locate all the rods.

10. Repeat this process from both ends.

11. With the rods held snugly in position, you are ready to weave.

Dizzy Rhino's founder can do this in under 3 minutes.
